SMITHSONIAN
ELLIPTIC FUNCTIONS TABLES

PREPARED BY
G. W. AND R. M. SPENCELEY
MIAMI UNIVERSITY, OXFORD, OHIO

(PUBLICATION 3863)

CITY OF WASHINGTON
PUBLISHED BY THE SMITHSONIAN INSTITUTION
NOVEMBER 1, 1947

PREFACE

These tables were inspired by the similar work of Sir George Greenhill and Col. R. L. Hippisley as published in *Smithsonian Mathematical Formulae and Tables of Elliptic Functions*. The pattern they designed has been followed closely by us. The chief difference is our inclusion of the three elliptic functions, $\text{sn}(u,k)$, $\text{cn}(u,k)$, $\text{dn}(u,k)$.

Columns A and D were computed first. From them were computed columns $\text{sn}(u)$ and $\text{cn}(u)$, checked by means of

Check I: $\text{sn}^2(u) + \text{cn}^2(u) = 1$, with a maximum error of ± 2 in the 15th decimal. Practically all errors in these first four columns were eliminated at this time, but some few managed to elude us.

Column $\text{dn}(u)$ was then computed, and checked by means of

Check II: $\text{sn}(K-u) \cdot \text{dn}(u) = \text{cn}(u)$, with a maximum error of ± 2 in the 15th decimal. Those few errors that had eluded us in Check I were discovered at this time.

Column $E(u,k)$ followed, computed by the formula

$$E(u+v) = E(u) + E(v) - k^2 \text{sn}(u+v) \text{sn}(u) \text{sn}(v),$$

where u was taken as $r/90 K$ and tabulated r° , while v was taken as $1/90 K$, i.e. 1° . Independent computations for $r^\circ = 15^\circ, 30^\circ, 45^\circ, 60^\circ, 75^\circ, 90^\circ$ were used as Check III, with a maximum divergence of ± 3 in the 15th decimal. In this method of computing the $E(u,k)$ column the errors are additive, and hence Check III is more sensitive than Checks I and II.

The ϕ column was computed last by means of $\sin \phi = \text{sn}(u)$, using Andoyer's 15-place Table of Natural Sines and Cosines. This was checked by computing $\cos \phi = \text{cn}(u)$. Interpolation into Andoyer's Tables was not used. Instead we developed a rapid method, fitted to machine computation, based on the two formulas

$$\sin(\phi + \epsilon) = \sin \phi + \epsilon \cos \phi - \frac{\epsilon^2}{2} \sin \phi - \frac{\epsilon^3}{6} \cos \phi$$

$$\cos(\phi + \epsilon) = \cos \phi - \epsilon \sin \phi - \frac{\epsilon^2}{2} \cos \phi + \frac{\epsilon^3}{6} \sin \phi$$

Maximum divergence here was kept to ± 4 in the 15th decimal.

Our manuscript columns are all, thus, correct to ± 4 in the 15th decimal. In printing, these have been cut to 12 decimal figures, assuring the accuracy of the 12th decimal digit.

Galley proofs were checked by adding entries in each column of our manuscript in groups of ten and subtracting the entries of the corresponding groups in the galley proofs and demanding that the remainder be equal to zero.

To teachers of mathematics and amateur computers, elliptic functions is a pleasant field of endeavor. Our present tables are not exhaustive. Three more

columns, $\text{snh}(u,k)$, $\text{cnh}(u,k)$, $\text{dnh}(u,k)$, added to ours, would open up the complex argument territory. In the popular field of undergraduate mathematics, a new elementary text on elliptic functions with a wide variety of problems and applications, supplemented by an adequate set of 5-place tables, would be a boon to teachers and students.

It is a pleasant task to acknowledge our indebtedness to Messrs. John Hook, Arthur Gels, Earl Boland, John Brinko, Edward Murphy, and Victor Sutcliffe, who, as N. Y. A. students, shared the work with us in the earlier years. These young men became expert and dependable computers; our thanks to them and to the Federal Government which paid them for their splendid and efficient work.

The considerable cost of printing these tables has been defrayed mainly by a grant from the Research Corporation of New York. Grateful acknowledgment is made for that grant, without which this volume could not have appeared.

We wish to acknowledge here our deep indebtedness to Dr. C. G. Abbot, former Secretary of the Smithsonian, for his invaluable advice and encouragement throughout. Dr. A. Wetmore, who has succeeded Dr. Abbot as Secretary, has assumed full responsibility for the publication of this volume, and for the work of seeing it through the press. We can never repay these two great men, and their corps of advisers, for their critical advice and practical assistance. To have been associated with them, however humbly, has been for us the experience of a lifetime.

G. W. S.

R. M. S.

OXFORD, OHIO,
April 25, 1946.

APPENDIX

In the Legendre-Jacobi-Abel system for computing elliptic functions, the following formulas, and tables, will be found useful. The formulas were compiled from the following list of reference texts:

- Smithsonian Mathematical Formulae, Edwin P. Adams, Ph.D.
- Theory of Elliptic Functions, Harris Hancock, Ph.D.
- Elliptic Functions, Alfred Cordew Dixon, M.A.
- Functions of Complex Variable, James Pierpont, L.L.D.
- Advanced Calculus, Edwin Bidwell Wilson, Ph.D.

Our use of the notations $\operatorname{snh}(u, \kappa)$, $\operatorname{cnh}(u, \kappa)$, $\operatorname{dnh}(u, \kappa)$ in the formulas below may be strange to the reader, but they seem to be a natural extension of the hyperbolic notation to the $\operatorname{sn}(u, \kappa)$, $\operatorname{cn}(u, \kappa)$, $\operatorname{dn}(u, \kappa)$ elliptic functions. We have used them for years; we hope they will be acceptable to other computers.

The basic number q may be computed as follows: given the modular angle θ , the number l is computed from

$$l = \frac{1}{2} \cdot \frac{1 - \sqrt{\cos \theta}}{1 + \sqrt{\cos \theta}}, \text{ whence}$$

$$q = l + 2l^5 + 15l^9 + 150l^{13} + 1707l^{17} + 20910l^{21} + 268616l^{25} + \dots$$

For 16-place accuracy this becomes difficult, if not impossible, for $\theta > 70^\circ$; for these we may use the relation

$$\ln q \cdot \ln q' = \pi^2$$

The Jacobi θ functions:

$$\theta_1(v, q) = 2q^{\frac{1}{2}}(\sin \pi v - q^2 \sin 3\pi v + q^6 \sin 5\pi v - q^{12} \sin 7\pi v + \dots)$$

$$\theta_2(v, q) = 2q^{\frac{1}{2}}(\cos \pi v + q^2 \cos 3\pi v + q^6 \cos 5\pi v + q^{12} \cos 7\pi v + \dots)$$

$$\theta_3(v, q) = 1 + 2q \cos 2\pi v + 2q^4 \cos 4\pi v + 2q^9 \cos 6\pi v + 2q^{16} \cos 8\pi v + \dots$$

$$\theta_0(v, q) = 1 - 2q \cos 2\pi v + 2q^4 \cos 4\pi v - 2q^9 \cos 6\pi v + 2q^{16} \cos 8\pi v - \dots$$

whence

$$\theta_2(q) = 2q^{\frac{1}{2}}(1 + q^2 + q^6 + q^{12} + q^{20} + q^{30} + q^{42} + \dots)$$

$$\theta_3(q) = 1 + 2q + 2q^4 + 2q^9 + 2q^{16} + 2q^{25} + 2q^{36} + \dots$$

$$\theta_0(q) = 1 - 2q + 2q^4 - 2q^9 + 2q^{16} - 2q^{25} + 2q^{36} - \dots$$

To compute K, K' we have

$$\sqrt{\frac{2K}{\pi}} = \theta_3(q), \text{ and, since } q = e^{-\pi \frac{K'}{K}}, \text{ it follows that } K' = -\frac{K}{\pi} \ln q.$$

To compute E, E' we have

$$1 - \frac{E'}{K} = \frac{2\pi^2}{K^2} \left[\frac{q - 4q^4 + 9q^9 - 16q^{16} + 25q^{25} - \dots}{1 - 2q + 2q^4 - 2q^9 + 2q^{16} - 2q^{25} + \dots} \right]$$

Check formula :

$$KE' + K'E - KK' = \frac{\pi}{2}$$

For reader's convenience

$$\begin{aligned} \pi &= 3.14159 \ 26535 \ 89793 \ 23846 \\ \pi^2 &= 9.86960 \ 44010 \ 89358 \ 62 \\ \frac{\pi}{2} &= 1.57079 \ 63267 \ 94896 \ 61923 \end{aligned}$$

(A)

$$\operatorname{sn}(u, \kappa) = \frac{\theta_3(q)}{\theta_2(q)} \cdot \frac{\theta_1(v, q)}{\theta_0(v, q)}$$

$$= \frac{1 + 2q + 2q^4 + 2q^9 + \dots}{1 + q^2 + q^6 + q^{12} + \dots} \cdot \left[\frac{\sin \pi v - q^2 \sin 3\pi v + q^6 \sin 5\pi v - q^{12} \sin 7\pi v + \dots}{1 - 2q \cos 2\pi v + 2q^4 \cos 4\pi v - 2q^9 \cos 6\pi v + \dots} \right]$$

$$\operatorname{cn}(u, \kappa) = \frac{\theta_0(q)}{\theta_2(q)} \cdot \frac{\theta_2(v, q)}{\theta_0(v, q)}$$

$$= \frac{1 - 2q + 2q^4 - 2q^9 + \dots}{1 + q^2 + q^6 + q^{12} + \dots} \cdot \left[\frac{\cos \pi v + q^2 \cos 3\pi v + q^6 \cos 5\pi v + q^{12} \cos 7\pi v + \dots}{1 - 2q \cos 2\pi v + 2q^4 \cos 4\pi v - 2q^9 \cos 6\pi v + \dots} \right]$$

$$\operatorname{dn}(u, \kappa) = \frac{\theta_0(q)}{\theta_3(q)} \cdot \frac{\theta_3(v, q)}{\theta_0(v, q)}$$

$$= \frac{1 - 2q + 2q^4 - 2q^9 + \dots}{1 + 2q + 2q^4 + 2q^9 + \dots} \cdot \left[\frac{1 + 2q \cos 2\pi v + 2q^4 \cos 4\pi v + 2q^9 \cos 6\pi v + \dots}{1 - 2q \cos 2\pi v + 2q^4 \cos 4\pi v - 2q^9 \cos 6\pi v + \dots} \right]$$

where $v = \frac{u}{2K}$. There are similar expansions for $\operatorname{sc}(u, \kappa)$, $\operatorname{sd}(u, \kappa)$, $\operatorname{cd}(u, \kappa)$.

These expansions imply similar ones for $\operatorname{sn}(u, \kappa')$, $\operatorname{cn}(u, \kappa')$, $\operatorname{dn}(u, \kappa')$ etc., where q' and v' are substituted for q and v and $v' = \frac{u}{2K'}$.

Also these expansions are true for the imaginary argument iu .

Thus :

(B)

$$-i \operatorname{sn}(iu, \kappa) = \operatorname{snh}(u, \kappa)$$

$$= \frac{\theta_3(q)}{\theta_2(q)} \left[\frac{\sinh \pi v - q^2 \sinh 3\pi v + q^6 \sinh 5\pi v - q^{12} \sinh 7\pi v + \dots}{1 - 2q \cosh 2\pi v + 2q^4 \cosh 4\pi v - 2q^9 \cosh 6\pi v + \dots} \right]$$

$$\operatorname{cn}(iu, \kappa) = \operatorname{cnh}(u, \kappa)$$

$$= \frac{\theta_0(q)}{\theta_2(q)} \left[\frac{\cosh \pi v + q^2 \cosh 3\pi v + q^6 \cosh 5\pi v + q^{12} \cosh 7\pi v + \dots}{1 - 2q \cosh 2\pi v + 2q^4 \cosh 4\pi v - 2q^9 \cosh 6\pi v + \dots} \right]$$

$$\operatorname{dn}(iu, \kappa) = \operatorname{dnh}(u, \kappa)$$

$$= \frac{\theta_0(q)}{\theta_3(q)} \left[\frac{1 + 2q \cosh 2\pi v + 2q^4 \cosh 4\pi v + 2q^9 \cosh 6\pi v + \dots}{1 - 2q \cosh 2\pi v + 2q^4 \cosh 4\pi v - 2q^9 \cosh 6\pi v + \dots} \right]$$

where $v = \frac{u}{2K}$.

These, of course, imply similar expansions for $-i \operatorname{sn}(iu, \kappa')$, $\operatorname{cn}(iu, \kappa')$ and $\operatorname{dn}(iu, \kappa')$ where q' and v' are substituted for v and q and $v' = \frac{u}{2K'}$.

For values of $\text{sn}(u, \kappa)$, $\text{cn}(u, \kappa)$, $\text{dn}(u, \kappa)$ where the modular angle θ lies between tabulated values, and where interpolation fails, direct computation may be employed up to, and including, $\theta=89^\circ$, using equations (A) above. Values, 15-places correct, can be thus computed without prohibitive labor. That, in fact, was the way our tables were computed.

For values of θ between 89° and 90° we may resort to Jacobi's imaginary transformation equations:

(C)

$$\begin{aligned}\text{sn}(u, \kappa) &= \frac{-i \text{sn}(iu, \kappa')}{\text{cn}(iu, \kappa')} = \frac{\text{snh}(u, \kappa')}{\text{cnh}(u, \kappa')} \\ \text{cn}(u, \kappa) &= \frac{1}{\text{cn}(iu, \kappa')} = \frac{1}{\text{cnh}(u, \kappa')} \\ \text{dn}(u, \kappa) &= \frac{\text{dn}(iu, \kappa')}{\text{cn}(iu, \kappa')} = \frac{\text{dnh}(u, \kappa')}{\text{cnh}(u, \kappa')}\end{aligned}$$

together with

(D)

$$\begin{aligned}\text{sn}(K-u, \kappa) &= \frac{\text{cn}(u, \kappa)}{\text{dn}(u, \kappa)} \\ \text{cn}(K-u, \kappa) &= \frac{\kappa', \text{sn}(u, \kappa)}{\text{dn}(u, \kappa)} \\ \text{dn}(K-u, \kappa) &= \frac{\kappa'}{\text{dn}(u, \kappa)}\end{aligned}$$

Confining our attention to $\text{sn}(u, \kappa)$, we may obtain from these, written out for ready use

(E)

$$\begin{aligned}\text{sn}(u, \kappa) &= \frac{\text{snh}(u, \kappa')}{\text{cnh}(u, \kappa')} \\ &= \frac{\theta_3(q')}{\theta_0(q')} \left[\frac{\sinh \pi v' - q'^2 \sinh 3\pi v' + q'^6 \sinh 5\pi v' - q'^{12} \sinh 7\pi v' \dots}{\cosh \pi v' + q'^2 \cosh 3\pi v' + q'^6 \cosh 5\pi v' + q'^{12} \cosh 7\pi v' \dots} \right]\end{aligned}$$

where $v' = \frac{u}{2K'}$

and also $\text{sn}(K-u, \kappa) = \frac{\text{cn}(u, \kappa)}{\text{dn}(u, \kappa)} = \frac{1}{\text{cn}(iu, \kappa')} \cdot \frac{\text{cn}(iu, \kappa')}{\text{dn}(iu, \kappa')} = \frac{1}{\text{dnh}(u, \kappa')}$,

that is

(F)

$$\text{sn}(K-u, \kappa) = \frac{\theta_3(q')}{\theta_0(q')} \left[\frac{1 - 2q' \cosh 2\pi v' + 2q'^4 \cosh 4\pi v' - 2q'^9 \cosh 6\pi v' + \dots}{1 + 2q' \cosh 2\pi v' + 2q'^4 \cosh 4\pi v' + 2q'^9 \cosh 6\pi v' + \dots} \right]$$

where $v' = \frac{u}{2K'}$.

The following two examples will be used to illustrate this method, first, because the results can be readily checked by reference to our tables, and, secondly, because the fundamental values q, q', K, K' are available without preliminary computation.

Example (1): Compute $\text{sn}(44^\circ, 89^\circ)$.

For $\theta = 89^\circ$ we have

$$\begin{aligned} q &= 0.40330, 93063, 38377, 8 \\ q' &= 0.00001, 90395, 55386, 95351 \\ K &= 5.43490, 98296, 25564 \\ K' &= 1.57091, 59581, 27243 \end{aligned}$$

Also $u = \frac{44}{90} K$.

Using equation (E) above, we have

$$\text{sn}(44^\circ, 89^\circ) = \frac{\theta_s(q')}{\theta_0(q')} \left[\frac{\sinh\left(44^\circ \frac{K}{K'}\right) - q'^2 \sinh 3\left(44^\circ \frac{K}{K'}\right) + \text{etc.}}{\cosh\left(44^\circ \frac{K}{K'}\right) + q'^2 \cosh 3\left(44^\circ \frac{K}{K'}\right) + \text{etc.}} \right]$$

To explain the argument $\left(44^\circ \frac{K}{K'}\right)$ we note

$$u = \frac{44}{90} K \text{ and } v' = \frac{u}{2K'}, \text{ whence } \pi v' = \frac{44}{90} \cdot \frac{\pi}{2} \cdot \frac{K}{K'} = 44^\circ \frac{K}{K'}$$

This change from the rational argument 44° on the left side of the equation to the irrational argument $44^\circ \frac{K}{K'}$ on the right side is unfortunate for the computer, but seems to be unavoidable.

Example (2): Compute $\text{sn}(88^\circ, 89^\circ)$

Here setting $u = \frac{2}{90} K$, and using equation (F) above, we have

$$\text{sn}(88^\circ, 89^\circ) = \frac{\theta_s(q')}{\theta_0(q')} \cdot \left[\frac{1 - 2q' \cosh 2\left(2^\circ \frac{K}{K'}\right) + 2q'^4 \cosh 4\left(2^\circ \frac{K}{K'}\right) \dots}{1 + 2q' \cosh 2\left(2^\circ \frac{K}{K'}\right) + 2q'^4 \cosh 4\left(2^\circ \frac{K}{K'}\right) \dots} \right]$$

Using this method the authors were able to compute $\text{sn}(89^\circ 59' 59'')$ with no extravagant amount of computing.

For computing $E(u, \kappa)$ we have

$$E(u, \kappa) = Z(u, \kappa) + \frac{E}{K} \cdot u$$

where

$$Z(u, \kappa) = \frac{2\pi}{K} \left[\frac{q \sin 2\pi v - 2q^4 \sin 4\pi v + 3q^9 \sin 6\pi v}{1 - 2q \cos 2\pi v + 2q^4 \cos 4\pi v - 2q^9 \cos 6\pi v} \right. \\ \left. \frac{-4q^{16} \sin 8\pi v + 5q^{25} \sin 10\pi v - \dots}{+ 2q^{16} \cos 8\pi v - 2q^{25} \cos 10\pi v + \dots} \right]$$

in which $v = \frac{u}{2K}$.

For computing the $E(u, \kappa)$ column in our tables we used also

$$E(u+v, \kappa) = E(u, \kappa) + E(v, \kappa) - \kappa^2 \operatorname{sn}(u, \kappa) \operatorname{sn}(v, \kappa) \operatorname{sn}(u+v, \kappa)$$

For tabulating $\operatorname{sn}(u, \kappa)$, $\operatorname{cn}(u, \kappa)$, $\operatorname{dn}(u, \kappa)$, $E(u, \kappa)$, $\phi = \sin^{-1}(\operatorname{sn}(u, \kappa))$

we set $u = \frac{r}{90} K = r^\circ$, whence $\pi v = \frac{r}{90} \cdot \frac{\pi}{2} = r^\circ$ for \sin , \cos , \sinh , \cosh .

Also $\kappa = \sin \theta^\circ$

$$\kappa' = \cos \theta^\circ$$

Again, we write

$$A(r^\circ) = \frac{\sin r^\circ - q^2 \sin 3r^\circ + q^6 \sin 5r^\circ - q^{12} \sin 7r^\circ + q^{20} \sin 9r^\circ - \dots}{1 + q^2 + q^6 + q^{12} + q^{20} + \dots}$$

$$B(r^\circ) = A(90^\circ - r^\circ)$$

$$D(r^\circ) = \frac{1 - 2q \cos 2r^\circ + 2q^4 \cos 4r^\circ - 2q^9 \cos 6r^\circ + 2q^{16} \cos 8r^\circ - \dots}{1 - 2q + 2q^4 - 2q^9 + 2q^{16} - \dots}$$

$$C(r^\circ) = D(90^\circ - r^\circ)$$

whence

$$\operatorname{sn}(r^\circ, \theta^\circ) = D(90^\circ) \cdot \frac{A(r^\circ)}{D(r^\circ)}$$

$$\operatorname{cn}(r^\circ, \theta^\circ) = \frac{B(r^\circ)}{D(r^\circ)}$$

$$\operatorname{dn}(r^\circ, \theta^\circ) = \frac{1}{D(90^\circ)} \cdot \frac{C(r^\circ)}{D(r^\circ)}$$

$$\text{Also } Z(r^\circ, \theta^\circ) = \frac{2\pi}{K} \left[\frac{q \sin 2r^\circ - 2q^4 \sin 4r^\circ + 3q^9 \sin 6r^\circ}{1 - 2q \cos 2r^\circ + 2q^4 \cos 4r^\circ - 2q^9 \cos 6r^\circ} \right. \\ \left. \frac{-4q^{16} \sin 8r^\circ + 5q^{25} \sin 10r^\circ - \dots}{+2q^{16} \cos 8r^\circ - 2q^{25} \cos 10r^\circ + \dots} \right]$$

whence

$$E(r^\circ, \theta^\circ) = Z(r^\circ, \theta^\circ) + \frac{r}{90} \cdot E$$

Beginning with $r^\circ = 1^\circ$ we obtain succeeding values $E(2^\circ)$, $E(3^\circ)$, etc., by means of $E(r^\circ + 1^\circ) = E(r^\circ) + E(1^\circ) - \kappa^2 \operatorname{sn}(r^\circ) \cdot \operatorname{sn}(1^\circ) \cdot \operatorname{sn}(r^\circ + 1^\circ)$.

The ϕ column was computed from the relation

$$\sin \phi = \operatorname{sn} u$$

$$\text{that is, } \phi(r^\circ, \theta^\circ) = \sin^{-1}(\operatorname{sn}(r^\circ, \theta^\circ))$$
